- IS01 - [Company] Information Security Policy

Definitions and Terms

Definitions and terms used in this policy follow the SANS Institute Glossary of Security Terms.

Overview

This policy defines the requirements for the identification, classification, ownership, and protection of all assets associated with the [Company] IIoT Platform. Effective asset management is essential for protecting platform data, maintaining service integrity, and ensuring compliance with security standards. This policy operates in conjunction with and is supplemental to the overarching asset management policies of [Division] and [Parent Company].

Purpose

The purpose of this policy is to:

- Establish and maintain a comprehensive inventory of all critical information, software, and hardware assets within the [Company] IIoT Platform.
- Assign clear ownership and accountability for every asset.

- Ensure all personnel understand their responsibility for protecting the assets assigned to them, including safeguarding their physical security.
- Define the acceptable and prohibited uses of company assets to prevent misuse, data loss, or compromise.

Scope

All employees, contractors, consultants, interns, temporary and other workers of [Company] working on the [Company] IIoT Platform must adhere to this policy. This policy applies to all operations maintained and run on the [Company] platform and its components.

Policy

Policy Hierarchy

All asset management activities must comply with the established policies and procedures of the parent organizations, [Division] and [Parent Company]. This policy provides specific clarifications and requirements for assets related to the [Company] IIoT Platform.

Asset Ownership

All assets (including data, software, and physical equipment) associated with the [Company] IIoT Platform must have a clearly assigned owner.

The owner is responsible for the asset's lifecycle, classification, risk assessment, and ensuring appropriate safeguards are in place.

Individual Responsibility

All employees, contractors, consultants, and other workers are personally responsible for the assets they have obtained or that have been assigned to them. This responsibility includes safeguarding the physical security of the asset (e.g., securing laptops, not leaving devices unattended in public) to prevent loss, theft, or unauthorized access.

Acceptable Use

Company assets are provided for business purposes only. All assets must be used exclusively for activities directly related to an individual's work requirements for the [Company] IIoT Platform.

Prohibited Use

The use of company assets for personal purposes is strictly prohibited. This includes, but is not limited to, installing unapproved personal software, personal file storage, or any activity not directly related to official duties.

Policy Compliance

Compliance Measurement

Compliance with this policy will be verified through:

Regular audits of the asset inventory to ensure all assets are registered and have assigned owners.

Periodic physical checks and spot-audits of company-issued equipment.

Reviews of asset usage logs and software installations to detect potential misuse or personal use.

Verification that personnel have acknowledged their responsibilities for the assets assigned to them.

Exceptions

Any exception to the policy must be approved by the Security Team in advance.

Non-Compliance

An employee found to have violated this policy may be subject to disciplinary action.
